SECTION 11: TOXICOLOGICAL INFORMATION	
Inhalation:	The material can cause respiratory irritation in some persons.
Ingestion:	Accidental ingestion of the material may be damaging to the health of the individual.
Skin contact:	The material is not thought to produce adverse health effects or skin irritation following contact (as classified by EC Directives using animal models). The acids and salts of ATMP, HEDP and DTPMP have a low level of acute skin toxicity. ATMP acid and its salts, in testing, were found to be practically non-toxic.
Eye contact:	Can cause eye irritation in some persons. The phosphonic acid compounds, ATMP, HEDP, DTPMP and their salts vary in their potential to irritate the eye, from virtually non-irritating to severely irritating with irreversible effects.
Chronic:	Substance accumulation, in the human body, may occur and may cause some concern following repeated or long-term occupational exposure. Exposure to small quantities may induce hypersensitivity reactions characterised by acute bronchospasm, hives (urticaria), deep dermal wheals (angioneurotic oedema), running nose (rhinitis) and blurred vision. Anaphylactic shock and skin rash (non-thrombocytopenic purpura) may occur.
Self-injection:	The most common adverse effects include gastrointestinal disturbances. In general, clodronate is well tolerated following intravenous, intramuscular or oral administration.
