

PORUS[®] ONE

Information for Cat Owners

Please read this information carefully before using Porus[®] One.

In order to achieve the best possible result from Porus One, it must be used correctly.

What you will find in this information:

1. What is Porus One used for?
2. How to use Porus One
3. How to store Porus One
4. Package contents and further information

1) What is Porus One used for?

Porus One is used to support kidney health in your cat.

Porus One binds protein digestion byproducts in the intestines where they are excreted in the feces. Because of this binding, the byproducts cannot be converted into uremic toxins, which require the kidneys for excretion. As a result, the binding of these byproducts with Porus One supports kidney health.

Porus One is suitable for cats of all ages.

2) How to use Porus One

Under the direction of a veterinarian, administer one packet (500 mg) daily at mealtime per cat.

If your cat takes oral medications, administer Porus One two hours after administering those medications.

Fresh water should always be available to your cat.

Caution: If your animal's condition worsens or does not improve, stop product administration and consult your veterinarian. Safe use in pregnant animals or animals intended for breeding has not been proven.

Warnings: Not for human consumption. Keep out of the reach of children and animals. In case of accidental overdose, contact a health professional immediately.

3) How to store Porus One

Porus One should be stored at room temperature.

Opened packets are to be used immediately.

4) Package Contents and Further Information

One box of Porus One contains 30 packets each with 500 mg of Renaltec™.
