## DERMATOLOGY RANGE TECHNOLOGIES

### Understanding Allergens

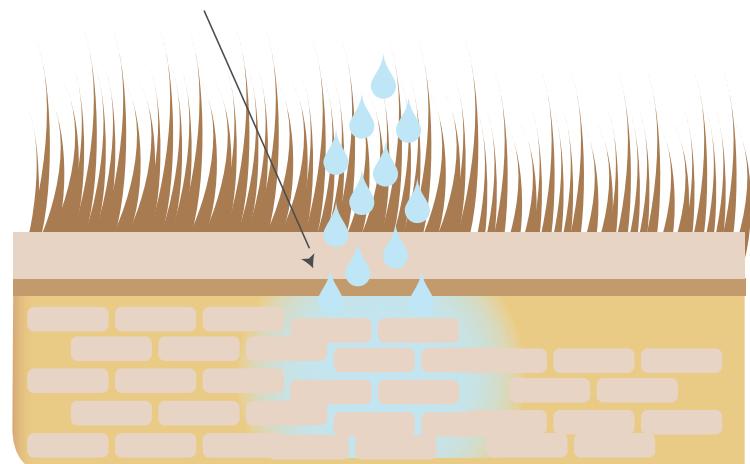

### Ceramides

Aid in moisturizing, repairing, and restoring dry, damaged skin

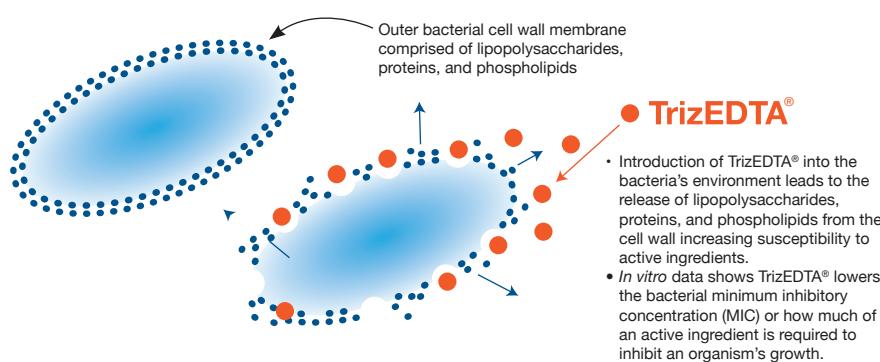

- Ceramides play an essential role in the structure and maintenance of the barrier function of the skin. Proper barrier function is necessary to prevent water loss and the entrance of allergens.
- Findings suggest that decreased amounts of ceramides in the skin of dogs may be involved in the impaired barrier function of their skin.<sup>4</sup>
- Ceramide supplementation may improve skin conditions caused by impaired barrier function.
- The ceramide complex in Dechra's products includes Ceramide 3, Ceramide 6 II, and Ceramide 1. In addition, it also includes phytosphingosine and cholesterol.

Ceramides help restore moisture in the skin and aid in rebuilding the epidermal barrier.

### TrizEDTA® Technology<sup>1</sup>

- Tromethamine, USP and Disodium EDTA, USP
- TrizEDTA® has antimicrobial potentiating effects against Gram-negative bacteria
- Chelates minerals in bacterial cell walls thereby increasing their susceptibility to active ingredients in topical products
- Alkalizing
- Antibiofilm agent<sup>2</sup>
- Non-ototoxic
- Topical use for dogs, cats, and horses

### Chlorhexidine Gluconate

- Generally used as adjunctive therapy for bacterial skin infections caused by Gram-positive and Gram-negative bacteria<sup>1</sup>
- Considered to have residual effects and can remain active on skin after rinsing<sup>1</sup>
- Antifungal properties in concentrations greater than 3%

### Miconazole

- A synthetic antifungal used to prevent and treat fungal skin infections
- Activity against some Gram-positive bacteria, including methicillin-sensitive and -resistant *Staphylococci*<sup>3</sup>

### Ketoconazole

A synthetic antifungal drug used to prevent and treat fungal skin infections

### Acetic & Boric Acid Formulation

- Cleansing, drying, acidifying, whitening
- Degreasing, deodorizing
- Balances skin surface pH making it unfavorable for the overgrowth of fungus/yeast
- Ceruminolytic, keratolytic, keratoplastic, and astringent actions

### Hydrocortisone

Provides anti-pruritic and anti-inflammatory properties
